## Changes in Operable Unit 4 Phase I Remediation Deliverables and Schedules

Susan Stiger, Associate General Manager  
Environmental Restoration Management  
EG&G Rocky Flats, Inc.

This memorandum is in response to your correspondence 94-RF-02993, dated March 14, 1994 on the same subject.

We are fully aware of the actions undertaken by the Joint Working Group for the Operable Unit (OU) 4 Interim Measure/Interim Remedial Action Environmental Assessment Decision Document (IM/IRA DD). Our staffs have been directly involved in conversations with the regulatory agencies.

The Department of Energy's (DOE) position is and continues to be one of commitment to providing the public with a quality decision document that clearly depicts the objectives of the program. This position is driven by an ultimate solution that is protective of human health and the environment, not by unattainable schedules and schedule-based performance awards.

The DOE will support the Colorado Department of Health (CDH) in the request for an extension. A formal request was transmitted to CDH on March 23, 1994. In keeping with the "team spirit" to perform a thorough review of the IM/TRA DD, EG&G will support DOE and the regulatory agencies by modifying existing schedules and diverting resources. During this extension, EG&G will ensure the delivery of a high-quality closure plan for Building 788.

In addition, we are concerned that EG&G has not provided prompt delivery of the information on the assessment of the impacts on groundwater resulting from potential leaching absorbed contaminants under saturated conditions. This topic was discussed in the January joint working sessions and committed to in the February 1 meeting (see attached meeting minutes). EG&G will provide a complete and detailed presentation no later than Wednesday, March 30, 1994 on the cost and schedule impacts related to performing this assessment.
